

ViniTannin Application Instructions

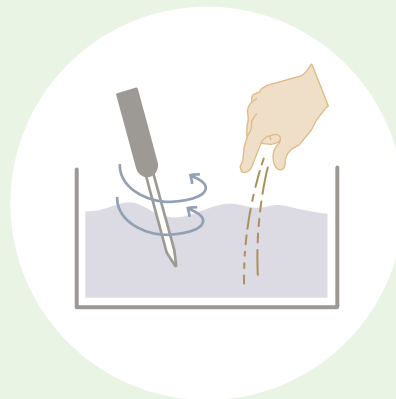

For all wine applications, it is important to add ViniTannin™ before adding any SO₂ to the process. If adding SO₂ is a necessity, please wait at least 15 minutes before SO₂ is added. We also recommend acidifying the tannin suspension with a small amount of tartaric acid during preparation to assist integration and improve effectiveness.

STEP 1

Add ViniTannin™ to warm water/wine.

STEP 2

Stir well until fully dissolved and acidify with tartaric acid.

STEP 3

Add to the juice/wine making sure the suspension is evenly distributed.
